Libraries

Description	Most common libraries for Python to Web Scraping

Beautiful Soup

A library for pulling data from html and XML files

```
pip install beautifulsoup4
```

Requests

A library for making HTTP requests

```
pip install beautifulsoup4
```

Selenium

Used for browser control and automating web interactions. It is useful when dealing with sites that have content generated dynamically through JavaScript.

```
pip install selenium
```

Scrapy

A comprehensive framework for extracting data from websites. It is powerful and offers advanced features.

```
pip install scrapy
```

Lxml

A library for parsing HTML and XML. Often used in conjunction with Beautiful Soup.

```
pip install lxml
```

Urllib

A standard Python module for sending HTTP requests.

```
(No separate installation required, it's already included in Python)
```

HTTPX

HTTPX is a fully featured HTTP client for Python 3, which provides sync and async APIs, and support for both HTTP/1.1 and HTTP/2.

```
pip install httpx
```
